Summary

- Brain-Computer/Machine Interface Systems researcher with deep expertise in analyzing Brain data (i.e., EEG, ECoG, MEG, NIRS) for a real-time/offline mental state recognition.
- Contribution to research communities and/or efforts, advance the state-of-the-art in the field, including generating patents and publications in top journals and conferences.
- Deep expertise in developing machine learning and deep learning systems to large-scale, real-world problems, and working with complex data to produce innovative analysis and predictive models for inference.

Education

12/2016 **PCAP**, *Higher Education Academy, UK*, Postgraduate Certificate in Academic Practice/Teaching in Higher Education.

02/2010 **Ph.D**, *Yeungnam University*, Department of Electronic Engineering, Daegu, South Korea.
- *Research area* : Time-series prediction, Machine learning and Neural Networks;

08/2006 **M.Sc**, *Yeungnam University*, Department of Electronic Engineering, Daegu, South Korea.
- *Research area*: Wavelet Analysis, Time-frequency localization; Physiological feature extraction;

07/2004 **B.Sc**, *Tashkent University of Information Technologies*, Uzbekistan.
- *Selected coursework*: Applied mathematics, Digital Signal Processing, Probability Theory, and Random Processes, Antennas and Wireless Propagation, Operating systems, C/Pascal/Assembly language, Embedded microcontroller systems.

Work Experience

5/2018 - 7/2018 **Visiting Professor**, *Department of Electrical Engineering & Computer Science, University of Houston*, Houston, Texas, U.S.A..
- Cortical source imaging of electroencephalographic signals in patients with stroke to examine neural correlates brain plasticity pre and post clinical trials with B.M.I. actuated exoskeleton.

09/2015- present **Assistant Professor**, *Robotics & Mechatronics Department, School of Science and Technology, Nazarbayev University*, Astana, Kazakhstan.

Teaching :
- Signals and Sensing with Laboratory (ROBT205)
- Statistical Methods and Machine Learning (ROBT407)
- Microcontrollers with Laboratory (ROBT206)
- Brain-Machine Interfaces (ROBT 613)

Research Focus:
- Deep learning algorithms for Brain-Computer/Machine Interfaces.
- Brain-Computer/Machine Interfaces in Neural-Rehabilitation after Stroke.
- Transfer learning applications in session/subject independent Brain-Computer/Machine Interfaces.
- ERP based BMI system design for Real-Time Control of a Mobile Robot for Telepresence
- High-Level Robotic Manipulator Control via Brain-Computer Interfaces for Assistive Applications

5/2014 - 9/2015 **NIH Postdoctoral Research Fellow II**, *Department of Electrical Engineering & Computer Science, University of Houston*, Houston, Texas, U.S.A.
- BMI-Exo Project: Brain-Machine Interface Control of a Therapeutic Exoskeleton for Neurorehabilitation.
  - Estimating neural correlates and mechanisms of an external command (mental intent) used to drive the external therapeutic exoskeleton for BMI.
- Neural Correlates of Infant Mirror Neuron System
  - Investigate the role the mirror neuron system plays in the motor learning of young infants via noninvasively acquired brain signals;
  - Categorizations of large-scale brain connectivity analysis to understand neural mechanisms of infant behavior.
- Electromagnetic-source localization and estimating brain network in connectivity analysis

01/2014-05/2014 **Research Scientist**, *Department of Neurology, Samsung Medical Center*, Seoul, South Korea.

- Investigated High-Frequency Oscillations of ECoG/E.E.G. signals relevant to Epileptogenesis using machine learning algorithms. Supported medical doctors through brain data analysis in the presurgical evaluation of patients with refractory epilepsy.
- Neuroelectromagnetic source localization from scalp E.E.G. & M.E.G. recordings for delineation of epileptogenic zones in the surgical treatment of refractory focal epilepsy.

04/2011-12/2013 **Senior Research Scientist**, *Robotics Research Division, Daegu Gyeongbuk Institute of Science and Technology*, South Korea.

Development of rehabilitation strategies for stroke patients via robot-assisted physical therapy with BCIs.

- Implemented kernel-based machine learning algorithms for online BCIs to control neuro-rehabilitation devices.
- Examined inter-subject/session variabilities to enhance fNIRS-based BCI performances.
- Design and optimization of non-invasive based BCI paradigms for real-time robot control.

01/2010-04/2011 **Postdoctoral Research Scholar**, *Robotics Research Division, Daegu Gyeongbuk Institute of Science and Technology*, South Korea.

Brain-Computer Interfaces in therapy and diagnosis of Attention Deficit and Hyperactivity Disorders (ADHD).

- Involved in quantitative E.E.G. and Neurofeedback methods of ADHD children. Time-frequency localization; Identification of strongly relevant neural signal patterns of ADHD using machine learning.
- Developed machine learning-based semi-supervised feature selection and classification algorithms.
- Participated in the developmental assessment of ADHD children during a long-term neuro-therapy in cooperation with a neurorehabilitation center at Daegu University.

Honors and Awards

11/2017 The Best paper award: *fNIRS motion artifact correction for overground walking using entropy-based unbalanced optode decision and wavelet regression neural network*," in Multisensor Fusion and Integration for Intelligent Systems (M.F.I.), 2017 IEEE International Conference.

06/2014 The Best poster award on "*The evaluation of accuracy and clinical usefulness of 3D E.E.G. source localization analysis*," Korean Epilepsy Congress 2014.

12/2012 The Best Researcher of the Year Award. Robotics Research Division, Daegu Gyeongbuk Institute of Science and Technology, Daegu, South Korea.

01/2011 Enlisted in Marquis Who's Who in the World 2011, 28th Edition, U.S.A.

09/2006 Awarded Korean Government Information Technology Scholarship for International Graduate Students for the Ph.D. program, South Korea.

09/2004 Awarded The Brain Korea #21 Scholarship for the M.Sc.program.

09/2000 Privileged enrollment at Tashkent University of Information Technologies for the undergraduate program; Full tuition-waiver supported by the Government of Uzbekistan.

Technical Skills

Software skills.

Expert in the Python Language and libraries such as Cython; excellent knowledge of C, C++. Experience with various tools and languages, including bash, LATEX, HTML, Git, and different database query languages.

Data Science.

Expert in NumPy, Scipy, Sklearn, PyTorch, TensorFlow, Keras, Azure DevOps.

Neural data acquisition systems.

Expert user of Nicolet E.E.G. Amplifiers, Blackrock Microsystems (intracranial recording), Functional Near-Infrared Spectroscopy FOIRE3000, BIOPAC fNIR200 Optical Brain Imaging, BioSemi Active-Two E.E.G. system, Brain Products E.E.G. amp., BIOPAC MP100 EEG amp. And G.tec g.USBamp systems.

Productivity applications.

TEX: [LATEX, BibTEX, PSTricks, Beamer].

System Environments.

Linux (Ubuntu, Pop_OS), Windows

Language Skills

English (Professional proficiency)

Korean (Professional conversational skills)

Russian (Native or bilingual proficiency)

Service to the Scientific Community

Associate Editor.

- IEEE Access Journal (Impact Factor: 3.7)
- PeerJ Computer Science (Impact Factor: 3.09)

Occasional Reviewer.

- IEEE Access Journal
- Neuroimage, Elsevier.
- IEEE Transactions on Neural Networks and Learning Systems
- Brain Research, Elsevier.

Program Committee Member and Session Chair.

- International Workshop on Artificial Intelligence for Healthcare Applications at International Conference on Pattern Recognition 2020.
- The 7th International Conference on New Trends in Information Science, Service Science and Data Mining, June 18-20, 2013, Jeju Island, South Korea.
- The 8th International Conference on Information Processing, Management, and Intelligent Information Technology, April 1-3, 2013, Seoul, South Korea.
- The 16th North-East Asia Symposium on Nano, Information Technology and Reliability, Oct.24-26, 2011, Macao.
- The 6th Int. Conference on Networked Computing, May 11-13, 2010, Gyeongju, South Korea.
- Int. Conference on Control Automation and Systems Oct.27-30, 2010, Seoul, South Korea.

Project Proposals, Participation & Coordination

01/2021 **Principal Investigator**, ***Brain-Machine Interfaces for Neural Rehabilitation after Stroke***, This project aims to accelerate the efficacy of robotic rehabilitation using a new neural interface system developed for upper-limb repair after stroke. It aims to facilitate expediate motor recovery from incomplete upper-limb paralysis and investigate in-depth understanding of cortical reorganization in the brain associated with the recovery..

01/2021 **Co-Investigator**, ***Classifier Validity and Its Applications in Bioinformatics***, The project studies the measures of classifier validity and explores their applications in bioinformatics. Nazarbayev University..

01/2019 **Co-Investigator**, ***Neural-assisted optimization of human learning with multimodal neuroimaging of E.E.G. and NIRS***, Implementing and validate a neural-assisted, machine-learning-based intelligent tutoring system that uses information from physiological signals to adapt the learning schedule to a user's individual learning capacity..

12/2016 **Co-Principal Investigator**, ***Development of Neuro-gaze Driven Assistive Robotic System for Improving the Quality of Life of Disabled People***, *A joint project with Prof. R. Q. Quiroga, Univ. Leicester, U.K.*, Develop a novel non-invasive HMI-robotic system for disabled and paralyzed patients by combining eye-gazing and E.E.G. signal processing with human-in-the-loop control with a comparable performance of state-of-the-art invasive BCI systems, Nazarbayev University, Kazakhstan.

09/2015 **Principal Investigator**, ***Development of a Brain-Computer Interface with a Robot and Functional-Electrical Stimulation for Upper-Limb Stroke Rehabilitation (BCI-ROBOFES)***, Evaluated by the committee of Oak Ridge Associated Universities (ORAU);.

9/2014 **Participant**, *Cognitive-Motor Development Research in Infants.*, Lead a team of Ph.D. students in exploring & decoding of the neural basis of *Imitation and Action Understanding* in freely-behaving infants via multimodal brain imaging techniques, University of Houston, Texas.

9/2014 **Participant**, ***The BMI-Exo Project: Facilitating Personalized Robotic Rehabilitation Of The Upper Limb, [N.I.H. Grant R01NS081854-02, National Robotics Initiative]***, Lead a part of research that focuses on understanding neurophysiological correlates of motor learning during movements in stroke patients..

04/2014 **Participant**, ***Development of high-resolution subdural electrodes and data mining methods for precise localization of epileptogenic zone in treatment of patients with refractory epilepsy.***, Participated in idea generation and in drafting/writing of the project proposal at Samsung Medical Center, Korea.
